

- **Climate Risk Region:**
- **Weather event addressed:**

Continental

Summer

- **Farming System:** Livestock Dairy cows
- **Farm vulnerability component:** Herd management
- **Description:**

Shifting the feeding time to the cooler night time, feeding two times a day

- **Comments on sustainability:**

During hot days, the fodder intake of the animals is reduced. When the temperatures decrease at the end of the day, the animals increase their fodder intake. To avoid the fodder going bad due to the high temperatures, it should be offered two times a day (not only once). The work load increases with this.
