

- **Climate Risk Region:**
- **Weather event addressed:**

Continental

Summer

- **Farming System:** Livestock Dairy cows
- **Farm vulnerability component:** Herd management
- **Description:**

Through seasonal calving in spring, high quality food is available for the lactating cows

- **Comments on sustainability:**

The need of high quality food is very high after birth. At the same time, grassland (pasture, grass cutting) is very rich in energy and protein in spring. The supply with optimal food supports the health and animal output. The adaptation possibilities in the barn and the conditions with the dairy company have to be checked.

## Implementation · MID TERM

### SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
