

- **Climate Risk Region:**
- **Weather event addressed:**

Continental

Summer

- **Farming System:** Livestock Dairy cows
- **Farm vulnerability component:** Fodder system and concentrates
- **Description:**

During drought, cutting of the grass to a minimum of 8-10 cm so the plant can store enough reserves in the stubbles

- **Comments on sustainability:**

Due a reduced cutting depth, the grass can store reserve substances in the stubbles for a successful regreening when enough water is available. This is the basis for further stable yields.

**Implementation · SHORT TERM**

## SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
