All

- **Farming System:** Livestock Dairy cows
- **Farm vulnerability component:** Fodder system and concentrates
- **Description:**

Fodder/manure or grassland cooperation with farms who have different types of grassland (wet/dry) or forage grass

- **Comments on sustainability:**

The possibility to get forage from a cooperating farm, possibly through the exchange for organic manure, increases the yield stability. It is therefore possible to avoid a lack of forage and the buying of expensive forage when the yields are low.

## Implementation · LONG TERM

### SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
