- **Farming System:** Arable crops All crops
- **Farm vulnerability component:** Soil and farming practices
- **Description:**

Fodder/manure cooperation with animal farms that get forage plants in return for organic fertilizer

- **Comments on sustainability:**

The arable crop farm can produce forage plants such as clover grass for an animal farm, which improve e.g. the soil structure, the soil life and the water infiltration into the soil of the arable farm. The animal farm, in return, delivers organic manure for the arable crops.
