

- **Climate Risk Region:**
- **Weather event addressed:**

Continental

Spring

Fall

- **Farming System:** Arable crops All crops
- **Farm vulnerability component:** Soil and farming practices
- **Description:**

The delayed creating of driving lanes reduces the risk of erosion, especially in hilly regions

- **Comments on sustainability:**

The missing driving lanes in the beginning of the plant development reduce the risk for soil erosion so the soil is kept on the field. At the same time, more rain water can be absorbed into the soil and the washing away of pesticides and nutrients can be avoided.

Implementation · SHORT TERM

SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
