

- **Climate Risk Region:**
- **Weather event addressed:**

Southern

Spring

Spring

Summer

- **Farming System:** All arable crops
- **Farm vulnerability component:** Crop System
- **Description:**

New or enhanced rotations adapted to expected trends. At plot level: 3 -5 different crops (5 ys) incl.: cereals, oilseeds, legumes

- **Comments on sustainability:**

Better water performance of soils enriched by long and diversified rotation. It reduces the need of inputs (fertilizers and phytosanitaires), then it's a better economic option. It may need advisory for new crops.

## Implementation · MIDTERM

### SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
