

- **Climate Risk Region:**
- **Weather event addressed:**

Southern

Autumn

Spring

All seasons

- **Farming System:** Arable crops    All arable crops
- **Farm vulnerability component:** Soil & farming practices
- **Description:**

Keep or promote terraces in farms with a high slope

- **Comments on sustainability:**

Terraces allow water infiltration (decreasing the slope) and improve soil structure. Then soil erosion and runoff decreases. Soil biodiversity improves thanks to a better soil. The main inconvenient is the high cost and the difficult in meccanization, so there may be an incentive to promote this measure.

Implementation · MIDTERM

## SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
