

- **Climate Risk Region:**
- **Weather event addressed:**

Southern

- **Farming System:** Permanent crops Vineyards
- **Farm vulnerability component:** Market strategy
- **Description:**

Quality production entails a less intensive farming pressure, a healthier and more resilient agroecosystem

- **Comments on sustainability:**

When vines are not under a stressing situation, the organoleptic quality of the grapes obtained is higher, resulting in a better potential for wine production and better revenues. Plants under this situation are also easier to manage (less impact from pest, less nutrient needs, etc.)

Implementation · MID TERM

SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
