

- **Climate Risk Region:**
- **Weather event addressed:**

Southern

Autumn

Spring

Spring

- **Farming System:** Arable crops Cereals
- **Farm vulnerability component:** Varieties
- **Description:**

If rainy autumns, advance date of sowing & long cycle varieties. If dry autumns, sow a short cycle variety before spring

- **Comments on sustainability:**

Ensure yields and economic profits avoiding shriveling (heat waves of late spring) and problems of low nascence. Thought it may be necessary to invest in seeds and difficult to plan costs and sown, share resources in cooperatives or farmers unions could be a solution at social level.
