

- **Climate Risk Region:**
- **Weather event addressed:**

Southern

All seasons

- **Farming System:** Livestock      Extensive livestock systems
- **Farm vulnerability component:**      Fodder system and concentrates
- **Description:**

Quality improvement of pasture can be achieved through sowing with native legumes seeds. Livestock grazing is necessary to decrease the competence of grasses, and to spread legumes seeds.

- **Comments on sustainability:**

A more covered soil increases its capacity of water filter and capture. A soil with more legumes decreases the nitrogen lixiviation. This measure involves an economic investment.

## Implementation · SHORT TERM

### SUSTAINABILITY COMPONENTS

- GHG emissions
- Air quality
- Soil
- Water
- Biodiversity
- Animal Welfare
- Economic
- Social
- Technical Feasibility
